SECONDARY: A61K035-80; A61P017-00

BASIC ABSTRACT:

FR 2792832 A UPAB: 20010126  
NOVELTY - A skin protection method, for preventing cellular aging,  
involves use of:  
    (i) heat shock proteins (I) isolated from algae; or  
    (ii) molecules (II) isolated from algae which induce constitutive  
and/or inductive heat shock proteins in the skin cells.  
DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:  
    (a) a pharmaceutical or cosmetic composition for preventing cellular  
aging of the skin, containing (I) or (II) as active agent; and  
    (b) the preparation of such compositions, by using an algal extract  
containing (I) (constitutive and/or inductive) or (II).  
ACTIVITY - Dermatological.  
MECHANISM OF ACTION - Antioxidant.  
    (I) or (II) increases the levels of heat shock proteins (which  
counteract oxidation processes caused by reactive oxygen derivatives) or  
stimulates their production in cutaneous cells.  
USE - For preventing cellular aging of the skin.
